

**INTERIM HOUSING LAND AVAILABILITY
REPORT
AS AT 31st MARCH 2018**

**Nottingham City Council
15th October 2018**

Introduction

1. This interim report presents Nottingham City Council's assessment of its five year housing supply, based on an update of the Strategic Housing Land Availability Assessment (SHLAA). Trajectory information is also included. It follows the adoption of the Nottingham City Aligned Core Strategy (Part 1 of the Local Plan) in September 2014.
2. The report is interim because it has been prepared in response to the Inspector's "Matters Issues and Questions", and to inform the public examination of the Part 2 Local Plan, the Land and Planning Policies Document. Hearing sessions are programmed for November and December. The timescales have not allowed for the usual engagement with the development sector, and so previous assumptions and information has been rolled forward.
- 3 Following the Examination, it is intended to undertake this engagement, and this interim report will be updated at that time.

National Planning Policy Framework (NPPF)

- 4 A new NPPF was published in July 2018. The NPPF contains transitional arrangements for the examination of local plans submitted on or before 24 January 2019 (paragraph 214), but the NPPF is a material consideration in planning decisions (paragraph 2). As this document is pertinent to both the Local Plan examination, and to planning decisions, compliance with the relevant parts of both versions of the NPPF are included below.

2012 NPPF

5. The 2012 NPPF requires planning authorities to maintain a supply of available land for housing. It says (paragraph 47) that planning authorities should:
 - identify and update annually a supply of specific deliverable¹ sites sufficient to provide five years' worth of housing against their housing requirements with an additional buffer of 5% (moved forward from later in the plan period) to ensure choice and competition in the market for land. Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply and to ensure choice and competition in the market for land; and

¹ To be considered deliverable, sites should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable. Sites with planning permission should be considered deliverable until permission expires, unless there is clear evidence that schemes will not be implemented within five years, for example they will not be viable, there is no longer a demand for the type of units or sites have long term phasing plans.

- Identify a supply of specific, developable² sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15.
6. With regard to the “additional buffer” referred to in the NPPF, Nottingham City does not have a “record of persistent under delivery of housing”. Annual completions in the City are historically strong with annual average requirements all being exceeded until the national housing crash took full effect (see Appendix D). Although completions did fall below the required averages during the recession, this was due to economic circumstances, and a return to more normal market conditions is now feeding through into completions. In the four years since the adoption of the Core Strategy completion levels returned to match those anticipated. The record of strong delivery can be demonstrated with reference to the most recent relevant plans (ie those that were in force at the time³, see also Appendix D – Comparison of actual completions against adopted plan at year-end).
- The Nottinghamshire and Nottingham Structure Plan (February 2006)⁴, gave Nottingham an average annual net dwelling provision of 925 for the period April 2001 to March 2021. In line with the Department for Communities and Local Government (CLG) definitions at the time, this excluded purpose-built student dwellings.
 - It was superseded in February 2006, at which time it required 6,475 homes to be completed, with actual completions being 7,705.
 - The East Midlands Regional Plan (March 2009), which included purpose-built student dwellings in line with a change in CLG definitions, provides for an annual average net increase of 1,000 between April 2006 and March 2026.
 - Between April 2006 and March 2010, the annual average was 1,137 (including student dwellings), so the Regional Plan provision was being exceeded until then.
 - The Regional Plan requirement was not met in April 2010 to March 2011 or in April 2011 to March 2012.
 - Although the Core Strategy was not adopted until September 2014, the Regional Plan was abolished in March 2013, so there was no adopted plan for 31 March 2013 or 31 March 2014. Core Strategy figures have been used for these years. The Core Strategy requires 475 homes per

² To be considered developable, sites should be in a suitable location for housing development and there should be a reasonable prospect that the site is available and could be viably developed at the point envisaged.

³ The Nottingham Local Plan was adopted in February 2005. As the Structure Plan was adopted in February 2006, the Local Plan housing figure was not in force at the end of any monitoring year.

⁴ Although the Nottingham Local Plan was adopted in November 2005, it was prepared under the 1996 Structure Plan. The Nottinghamshire and Nottingham Joint Structure Plan was adopted in February 2006.

year from April 2011 to March 2013, and 880 homes per year April 2013 to March 2018.

- The requirement for 2012/13 was met, the requirement for March 2013/14 was not. The requirement for 2014/15 was missed by four dwellings, and requirements for 2015/16, 2016/17 and 2017/18 were met.
 - Despite not meeting the annual target in 2013/14 and 2014/15, completions have now caught up, and the overall provision required by the Core Strategy to 2017/18 of 5,350 new homes has been exceeded, with 6,020 new homes being completed.
 - Thus the requirement has not been met in only four of the last ten years (which can be taken as an economic cycle), and completions are ahead of requirements of the Core Strategy.
7. It is clear, therefore, that the falling of the City's housing completions below plan targets over four of the last ten years was due to the state of the national economy and housing market at the time, and Nottingham does not have "a record of persistent under delivery of housing". Consequently, an additional buffer at the lower level of 5% is required in Nottingham's case rather than 20% – i.e. the equivalent of 5.25 years' supply of deliverable sites is required in total.

2018 NPPF

- 8 The 2018 NPPF also requires a five year supply of housing to be demonstrated. Paragraph 73 states "Strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period, and all plans should consider whether it is appropriate to set out the anticipated rate of development for specific sites. Local planning authorities should identify and update annually a supply of specific deliverable⁵ sites sufficient to provide a minimum of five years' worth of housing against their housing requirement set out in adopted strategic policies⁶, or against their local housing need where the strategic policies are more than five years old⁷. The supply of specific deliverable sites

⁵ To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.

⁶ For the avoidance of doubt, a five year supply of deliverable sites for travellers – as defined in Annex 1 to Planning Policy for Traveller Sites – should be assessed separately, in line with the policy in that document.

⁷ Unless these strategic policies have been reviewed and found not to require updating.

should in addition include a buffer (moved forward from later in the plan period) of:

- a) 5% to ensure choice and competition in the market for land; or
- b) 10% where the local planning authority wishes to demonstrate a five year supply of deliverable sites through an annual position statement or recently adopted plan⁸, to account for any fluctuations in the market during that year; or
- c) 20% where there has been significant under delivery of housing over the previous three years, to improve the prospect of achieving the planned supply⁹

9 The approach to under delivery is now clarified, and Nottingham City has met its housing requirement as set out in the Core Strategy for all of the past three years, (see Appendix D). Nottingham therefore does not have a record of “significant under delivery of housing”, and therefore a five year buffer is appropriate.

Core Strategy Adopted September 2014

10. The Aligned Core Strategy recognises the economic circumstances and weak housing market in the early years of the plan period by providing for housing provision to be delivered in 5 year tranches. Housing delivery is anticipated to be lower in the early years of the Core Strategy, increasing in the middle and later years.

11. The Core Strategy provides for a minimum net increase of 17,150 dwellings in the City between 2011 and 2028. The delivery is distributed as follows:

	Total in period	Annual average
2011/2013	950	475
2013/2018	4,400	880
2018/2023	5,950	1,190
2023/2028	5,850	1,170

12 The NPPF requires Councils to produce a trajectory setting out anticipated annual housing delivery over the Local Plan period. Trajectories are an illustration of anticipated housing delivery at a particular point in time, and are therefore reviewed annually as housing and site information is updated. The trajectory and table are attached to this report at Appendix C.

⁸ For the purposes of paragraphs 73b and 74 a plan adopted between 1 May and 31 October will be considered ‘recently adopted’ until 31 October of the following year; and a plan adopted between 1 November and 30 April will be considered recently adopted until 31 October in the same year.

⁹ From November 2018, this will be measured against the Housing Delivery Test, where this indicates that delivery was below 85% of the housing requirement

13. The Core Strategy also sets out a methodology for assessing five year housing land supply for Nottingham. Footnote 32 to paragraph 3.2.11 of the Core Strategy describes the agreed methodology, which allocates any shortfall in housing over the remaining plan period in an approach known as the 'Liverpool approach'. The Inspector at the examination considered locally specific evidence which she considered justified the use of this methodology. However, the information in this report uses both the 'Liverpool' and 'Sedgefield' methodologies.

Five-Year Land Supply Assessment

Period Covered

14. The assessment covers the period from 1st April 2018 to 31st March 2023. It is therefore based on known completions data for the period to 31st March 2018.

Site Assessments

15. The sites identified within the supply of deliverable and developable sites have been drawn from the Strategic Housing Land Availability Assessment (SHLAA). Each site has been assessed, taking account of its availability, suitability, and deliverability for housing purposes. This has included the identification of any key planning policy (or other) constraints or designations, identification of the planning status for each site, and an assessment of the likely viability of development.
16. The total number of dwellings on all deliverable and developable sites exceeds the number needed to meet the minimum new homes up to 2028 in Policy 2 of the Core Strategy; the total difference being 2,636. (19,786 from the Cumulative Completions row in the Trajectory at Appendix C minus 17,150, the housing requirement 2011 to 2028).

Housing Land Supply Summary

17. Overall housing requirements for the Aligned Core Strategies and calculation of the 5 year supply available:
18. The 5 year requirement for 2018 to 2023 is calculated by looking at the ACS requirement for 2018 to 2023 (and subtracting the surplus of 2011 to 2018 completions over the ACS requirement for that period).
19. The ACS requirement for 2011 to 2018 is 5,350 (the 2011 to 2013 requirement (950) plus 100% of the 2013 to 2018 requirement (4,400)). Actual net completions between 2011 and 2018 were 6,020. This surplus of 670 is allocated throughout the remainder of the plan-period, i.e. it is 67 per year for the period 2018 to 2028.

Summary of deliverable sites:

5 year supply

Under Construction	2,123
Current Full Permission not under construction	3,270
Current Outline Permission	369
Prior Approvals	377
Permission Awaiting S106	315
Local Plan allocations	1,734
10 or more dwellings without planning permission	200
Less than 10 dwellings without planning permission	0
TOTAL	8,388

5 year requirement

ACS Dwelling Provision and 5 year Requirement	
	Net Dwellings
Dwelling Provision 2011-13	950
Dwelling Provision 2013-18	4,400
Total Dwelling Provision 2011-17	5,350
Dwellings completed to March 2018	6,020
Surplus at 2018 against policy requirements (6,020-5,350)	670
Surplus per annum 2018-28	+67
Total Dwelling Provision 2018-23	5,950

(a) Liverpool method:

5 year Housing Requirement (5 year target minus surplus plus 5% buffer (5,950 - (67 x 5)) + 297)	5,912
Total supply (8,388 + 535 windfall and – 150 demolitions)	8,773
Difference between supply and requirement (8,773- 5,912)	+2,861
Total five year supply ((8,773 / 5,912) x 5)	7.42

(b) Sedgfield method:

5 year Housing Requirement (5 year target minus surplus plus 5% buffer (5,950 - 670 + 297))	5,577
Total supply (8,388 + 535 windfall and – 150 demolitions)	8,773
Difference between supply & requirement (8,773 - 5,577)	+3,196
Total five year supply ((8,773 / 5,577) x 5)	7.87

20. The conclusion is, therefore, that Nottingham City has more than the required 5 year supply, including a 5% buffer, under both the Liverpool and Sedgefield methodologies.

Windfall allowance

21. The NPPF (2012 version at paragraph 48 and 2018 version at paragraph 70) says that local planning authorities may make an allowance for windfall sites in the five-year supply if they have compelling evidence that such sites have consistently become available in the local area and will continue to provide a reliable source of supply.
22. Because of the nature of sites in a large urban area (i.e. they were mainly formerly used for non-housing uses and may become available at short notice) Nottingham has a history of large numbers of windfall sites coming forward for development. Even with the introduction of SHLAAs, which are intended to list all sites which may be suitable for housing and are likely to be developed, and in a recovering housing market, they are continuing to come forward in significant numbers.

Past windfall rate

23. Due to a change in the way figures were reported, there is a break in the City Council's windfall data in 2013/14. Data exists for April 2008 to March 2013 and for April 2014 to March 2018. However, now that there is four years of data continuity since April 2014, significant weight can now be applied to the more recent figures.

Historic Trend - April 2008 to March 2013

24. The historic data (April 2008 to March 2013) shows how windfalls came forward over the period of the recession; 194 sites totalling 1,189 dwellings were granted planning permission between April 2008 and March 2013 without having been included in the 2008 SHLAA (excluding garden sites). This was an annual rate of 238 dwellings. By 31st March 2013, there were 541 dwellings completed on these sites, 468 of them purpose-built student flats. This amounts to 108 dwellings per annum or 135 if the first year is excluded. (It is reasonable to do this because it would normally take at least a year for a site to receive planning permission and have completions on it, the exception being for those dwellings which come forward without planning permission, see paragraph 27 below.)

Recent Trends - April 2014 to March 2018

25. More recent data shows that windfalls not only continue to come forward, but the numbers have increased over the historic levels. Between April 2014 and March 2018, 341 sites totalling 2,779 dwellings were granted planning permission/prior approval (without having been included in the SHLAA (excluding garden sites, this figure includes dwellings where no planning application was required). The annual average over these four years is 85 sites and 695 dwellings granted planning permission.

Table: Windfall Sites and dwelling numbers granted permission by year

Year	Total planning permission/prior approval (Dwelling numbers)	Planning permission, if applicable. (Dwelling numbers)	Number of Planning Permitted Sites	Prior Approvals (Dwelling numbers)	Number of Prior Approval Sites
2014/15	1,006	407	95	599	13
2015/16	739	397	58	342	11
2016/17	604	566	50	38	6
2017/18	430	426	106	4	2

26. The location of prior approvals, largely being existing office space, is difficult to predict, and as such many of these sites were not included in the SHLAA. It should be noted that many prior approvals are for large student housing schemes in the City Centre and these large student schemes have a good record of delivery. It will be noted from the table above that windfall prior approvals have tailed off significantly over the monitoring period, whilst planning permissions have remained buoyant; excluding prior approvals leaves an annual average rate of 449 dwellings per year in windfall planning permissions, a significant increase over the 238 reported during the period April 2008 to March 2013.

27. The table below shows completions on Windfall sites for the four years of the more recent data. Completions on windfall sites where planning permission was granted prior to 2014/15 are not included, due to changes in the way figures were reported. Therefore, for 2014/15, the figure of 80 completions are those that were granted planning permission/prior approval in 2014/15, ie they are "in year" windfall completions. As previously noted, it usually takes at least a year for a site to deliver homes following the grant of planning permission, so numbers increase in subsequent years.

Table: Completions on windfall sites by year (not including residential gardens)

Year	Cumulative planning permission/prior approval	Cumulative Windfall Completions	Annual windfall completions
2014/15	1,006	80	80
2015/16	1,745	381	301
2016/17	2,349	763	382

2017/18	2,779	1,343	580
---------	-------	-------	-----

28. Of the 2,779 dwellings granted planning permission on non SHLAA sites between 2014/15 to 2017/18, 1,343 (net) have been completed. Of these 548 were prior approvals and 675 were student housing.
29. For the four years, the average level of completions on windfall sites is 336 per year. Taking into account the fact that completions on windfall sites granted planning permission prior to 2014/15 are not included, the actual average is likely to be higher.

Windfall allowance

28. Based on this annual average, and taking account of the trend of fewer prior approvals feeding into completions, a conservative windfall allowance of 150 dwellings per year from all sources is included for years 3 to 5 (see Appendix D). A conservative estimate of 30 dwellings which do not require planning permission/prior approval is included for years 1 and 2. These dwellings do not have a lag between planning permission/prior approval and development (since they do not require planning permission), and they are not captured as part of the analysis of sites which underpins the 5 year land supply. This equates to 510 dwellings in the 5 year supply (2017/18 to 2021/22) to allow for windfall sites. (Windfall completions are assumed to rise to 150 in year 3 as it is conservatively assumed that windfall completions which require planning permission/prior approval are already captured within the information on sites with planning permission/prior approval, given that a planning permission has a period of 3 years to commence).
29. This justification for including windfall sites in the 5 year land supply also applies to the inclusion of windfall sites in the longer term trajectory (see Appendix D). In the longer term, it is likely that more large sites which are not for students will also come forward, including on employment sites which are currently in use, and so the windfall allowance increases beyond the 5 year period.
30. Completions on windfall sites will continue to be monitored, and where the evidence indicates changes in assumptions are required, these will be reflected in future Housing Land Availability Reports.

Developable sites

31. Developable sites as at 31st March 2018 would accommodate 3,391 dwellings (2,958 dwellings to 2028) (see Appendix B) after 2023. The requirement of the NPPF is to identify sites for years 6 to 10 and, if possible, years 11 to 15. Including dwellings on deliverable sites which are anticipated to continue to deliver housing after 2023 (935), sites have been identified for 4,326 dwellings (3,893 dwellings to 2028).
32. Additionally, after 2023 there are a predicted 1,250 windfalls and only 150 demolitions so that the total expected net completions is 4,993 to 2028.

This compares with 5,850 required by the Aligned Core Strategy between 2023 and 2028 see paragraph 6 above).

33. However, the trajectory anticipates that by 31st March 2023 housing completions will be 3,493 dwellings above the cumulative housing target of 11,300, so the requirement between 2023 and 2028 is only 2,357 dwellings. This means that the requirement with regard to years 6 to 10 has been met and the years to the end of the Plan period also identified.

Schedules of sites

34. The full schedule of sites which are considered to be deliverable within the period from 1st April 2018 to 31st March 2023 is set in Appendix A. Appendix B contains a list of developable sites in the SHLAA, i.e. those where it is unlikely that housing will be delivered by 2023 but there is a reasonable prospect of their doing so by the end of the ACS period (2028). Development on the sites listed in Appendices A and B forms the basis of the housing trajectory (see Appendix C).
35. Further details on the vast majority of the sites, i.e. those that were in the SHLAA last year, can be found in the SHLAA report (which is currently being updated).

Appendix A: Schedule of Deliverable Sites (as at 31st March 2018)

Sites Under-Construction at 31st March 2018

SHLAA	Site name	Latest planning application reference no.	Deliverable 2018 to 2023	Developable 2023 to 2028	Total 2018 to 2028
268	Springfield The Crescent, Alexandra Park	15/01653/PFUL3	5	0	5

Although the deliverable sites are those included in the Strategic Housing Land Availability Assessment (SHLAA), other sites may be identified in the course of the preparation of the Local Plan (Land and Planning Policies document). Likewise, the Local Plan preparation process may result in some of the SHLAA sites not being taken forward as allocations.

Purpose-built student units (dwellings) are included in the figures, including the Aligned Core Strategies strategic allocation, in line with current Department for Communities and Local Government definitions.

Appendix D

Comparison of actual completions against adopted plan at year-end (e.g. 31/3/1998 for 1997/98)

April to March	Gross comps exc. Student dwellings	Demolitions	Net comps exc. Student dwellings	Student dwellings (net)	Net comps inc. student dwellings	Nottm Local Plan (400 p.a. Gross 1991 to 2011) adopted Oct 1997***			Structure Plan (925 p.a. Net 2001 to 2021) adopted Feb 2006			Regional Plan (1,000 p.a. * There was no adopted plan at 31/3/13 or 31/3/14.

** Local Plan says actual completions to December 1995 were 2,937. 1996/97 has been added to this.

*** The Nottingham Local Plan (1997) requirement was gross.

**** CLG's definitions changed to include student dwellings in 2009, so it is probably correct to include them in the actual to compare with the Regional Plan for 2008/09. However, even if the change is not made until 2009/10 the Regional Plan requirement is still met in 2008/09.
